Newsletter & Portfolio Review

March 2011 | Volume 10 | Baker Financial Services

March 31st Market Update

Through the first quarter of the year, the major stock indices have moved higher by roughly 5%. Although we have seen volatility in recent weeks, the strong move upward that we experienced in the fall of 2010 has (so far) spilled over into 2011.

While we do feel that most of the easy gains in this bull market have been realized, many of the analysts that we follow are forecasting another good year for the stock market. However, we are certainly aware of the potential headwinds that the market is currently facing. Unrest throughout much of the Middle East, rising oil prices, possible inflation and our government's current debt problem are at the forefront of our thoughts as we build and monitor your portfolio.

We know that volatility is always present in both the equity and fixed income markets and we are positioning the portfolio in a way that will hopefully smooth out the ups and downs that are headed our way here in 2011.

With rising interest rates in store over the next few years, we are doing our best to structure our bond holdings on the short end of the yield curve and are holding positions that have historically held their own in rising rate environments.

In regards to our equity positions, we are monitoring them closely and are again looking to holdings that have historically provided a good inflation hedge. At the same time, we understand that the reward for owning stocks also comes with risks as well. On that note, if the risk/reward begins to look unattractive, we won't hesitate to trim some of our recent winners for other options. While we believe that 'time in the market' is much more important than 'timing the market', rebalancing is something that we strongly believe in…..and something that we will take advantage of.

Tax Law Changes for 2011

A good mantra, for investing and for the rest of your life, is “Focus on what you can control.” While most people are inclined to put taxes into the "out of my control" bucket, that doesn't have to be the case. Where taxes are concerned, it is always a good idea to consult with a tax professional. This article is intended only as a starting point to help you become informed about tax-law changes; it does not constitute tax advice. Some of these changes have an impact only on those in very high tax brackets, while others affect individuals of all income levels.

Social Security Payroll Tax Holiday: Social Security payroll taxes have dropped from 6.2% to 4.2% for 2011, giving an effective boost in pay to all workers. (As in the past, you won't pay Social Security tax on any earnings over a certain level--currently $106,800.) This provision is designed to get people out there spending, but a better idea, assuming you can afford it, is to divert that money to another retirement fund: your own. Increase your 401(k) plan contribution as close as you can to the annual limit; in 2011, that limit remains $16,500 for those under 50 and $22,000 to those over 50. And if you're already funding your 401(k), 403(b), or 457 plan to the max—or if you would rather save outside the confines of your company plan—you can direct that money to an IRA instead. IRA contribution limits are also unchanged from 2010: $5,000 for individuals under 50 and $6,000 for those over 50.

Alternative Minimum Tax: Toward the end of 2010, Congress put in place a so-called patch to keep a new group of taxpayers from having to pay the alternative minimum tax, a parallel tax system that disallows many of the credits and deductions that taxpayers are entitled to under the conventional tax system. That's good news, but if you've fallen into the AMT zone in the past, the latest patch isn't likely to keep you out of it. However, by taking steps to control your AMT-subject income and managing your deductions, you may be able to reduce your AMT tax hit. Some key strategies that you can employ include carefully managing the exercise of stock options (a well-versed tax advisor should be able to help with this) and watching out for private-activity municipal bond funds, which aren't taxable under the conventional tax system but are for the purposes of AMT.

Dividend Tax: Through 2012, the tax on qualified dividends remains at zero for taxpayers in the 10% and 15% tax brackets, and is 15% for all other taxpayers.

Long-Term Capital Gains Tax: Through 2012, taxpayers in the 10% and 15% brackets will not owe capital gains tax on the sale of assets they've owned for more than one year. Long-term capital gains tax rates remain at 15% for all other taxpayers. Short-term capital gains are taxed as ordinary income.

Estate Tax: Although the federal estate tax was set to jump to 55% for estates of more than $1 million in 2011, last-minute Congressional maneuvering resulted in a much less onerous rate for people who die with a lot of assets. The top estate tax rate is 35% for 2011 and 2012, and it only affects those who have amassed estates of more than $5 million. Those who inherit assets will also once again receive a step-up in the cost basis of those assets, meaning that the inherited assets are valued at their fair market value as of the decedent's death.

Given the more generous estate-tax limits, you may be assuming that a visit to your estate-planning attorney isn't necessary, but even if you don't anticipate that you will ever amass $5 million in assets, there's more to creating an estate plan than sidestepping taxes. A properly crafted estate plan will detail how you would like your assets distributed after you are gone. Gift Tax: The annual gift-tax exclusion stays the same as it was in 2010: $13,000. That means you can gift $13,000 apiece to an unlimited number of people this year without having to worry about a gift tax or even fill out the gift-tax paperwork.

Major Stock Market Indexes

There are a number of stock market indexes that are frequently mentioned on television and cited in financial newspapers and magazines. They measure various slices of the stock market and can be used as performance benchmarks for both investment vehicles (such as mutual funds) and one's own portfolio returns. Here are three of the most popular and referenced indexes.

Dow Jones Industrial Average: The Dow Jones Industrial Average was first unveiled by Charles H. Dow on May 26, 1896, and consisted of 12 stocks. In 1916, the industrial average expanded to 20 stocks and in 1928 was subsequently bumped to 30, where it currently stands. The index constituents are 30 of the world's largest, most influential and well-known companies. Whenever you hear someone referring to what "the market" did in any given day, they are most likely referring to the Dow.

Changes to the index are rare and usually take place, according to Dow Jones Indexes (www.djaverages.com), "when a current component is going through a major change, such as a shift in its main line of business, acquisition by another company, or bankruptcy. There is no review schedule."

Standard & Poor's 500 Stock Index: When you hear that a portfolio has "beaten the market" it is most likely being compared with the S&P 500, which was first published in 1957. The index is composed of 500 leading companies in leading industries of the U.S. economy, focusing on the large-cap segment of the market but also serving as a proxy for the total market—covering approximately 75% of the U.S. equities market.

The S&P Index Committee follows a set of published guidelines for maintaining the index (complete details of these guidelines are available at www.indices.standardandpoors.com). Some of the criteria for addition include a market capitalization (share price multiplied by shares outstanding) in excess of $3 billion, adequate liquidity (how easy it is to buy and sell shares) and reasonable price and financial viability. Those that substantially violate the criteria are dropped.

Nasdaq Composite Index: Launched in 1971, the Nasdaq Composite Index measures all Nasdaq domestic- and international-based common type stocks listed on the Nasdaq Stock Market. The index includes nearly 3,000 securities. While it is best known for its large portion of technology stocks, it also contains stocks in other industries.

To be eligible for inclusion in this index, securities must be listed on the Nasdaq Stock Market and they need to be of a specific type. For more information, visit www.nasdaq.com.

Please keep in mind that a company can be a member of more than one of the three indexes described above. Microsoft is an example of a company that has a place in all three.

Stock Market Index Comparison

Stock Index	Dow	S&P 500	Nasdaq
Year Introduced	1896	1957	1971
Constituents	30	500	2,900*
Types of Companies	Large, well-known, influential.	Leading companies in leading industries. Focuses on large-cap segment.	Large number of technology stocks. Also stocks in other industries.
Index Modifications/ Eligibility	Companies undergoing a major change can lead to a modification.	Market cap in excess of $3 billion, adequate liquidity/ reasonable price, financial viability.	Listed on Nasdaq Stock Market and needs to be specific security type.
Examples of Current Constituents*	Walt Disney, Johnson & Johnson, Coca-Cola, McDonald's, Walmart	AT&T, Boeing, General Mills, Procter & Gamble, Google	Apple, eBay, Cisco, Dell, Yahoo!

*As of 12/02/2010

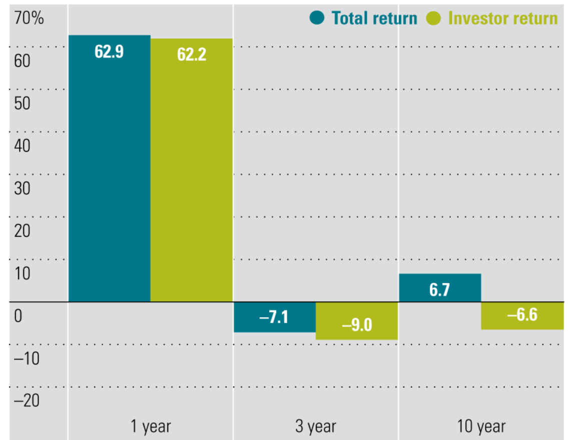
Stocks are not guaranteed and are more volatile than other asset classes. The information above is provided for illustrative and information purposes only. The indexes noted are unmanaged and can not be directly invested in. References to specific securities should not be viewed as a recommendation to buy or sell the mentioned security.

Chasing Performance

Investors often endure poor timing and planning as many chase past performance. They buy into funds that are performing well and initiate a selling spree following a decline. This becomes evident when evaluating a fund's total return compared with the investor return. Overall, the investor return translates to the average investor's experience as measured by the timing decisions of all investors in the fund.

The image illustrates the investor return relative to the total return for a given fund. Over the short term, both the total and investor returns were positive, with the investor return ending slightly lower. Over a 10-year period, however, total return greatly exceeded investor return. Investors who attempted to time the market ran the risk of missing periods of exceptional returns.

Comparison of a Fund's Return Performance Over Time



Past performance is no guarantee of future results. This is for illustrative purposes only and not indicative of any investment. Returns and principal invested in stocks are not guaranteed. Morningstar investor returns measure how the typical investor in that fund fared over time, incorporating the impact of cash inflows and outflows from purchases and sales. It is not one specific investor's experience, but rather a measure of the return earned collectively by all the investors in the fund. Total return measures the percentage change in price for a fund, assuming the investor buys and holds the fund over the time period, reinvests distributions, and does not make any additional purchases or sales. Investor returns are not a substitute for total returns but can be used in combination with them. Data as of February 2010.

Source: The fund illustrated in this example was selected from Morningstar's open-end database.
